Bearing System Options

Gliding Surface Technology Plain Bearing with FrelonGOLD®

- LOW COST
- Self-lubricating design
 - No sealing
 - No particulates
- Tolerates temperature extremes
- Corrosion-resistant
- Industry standard interchangeable
- Vibration damping
- Suitable for an extremely short stroke

Technical Specifications – Page 10

Lead Screw Options

- 6 mm and 10 mm diameter lead screw
- Self-lubricating PTFE coated

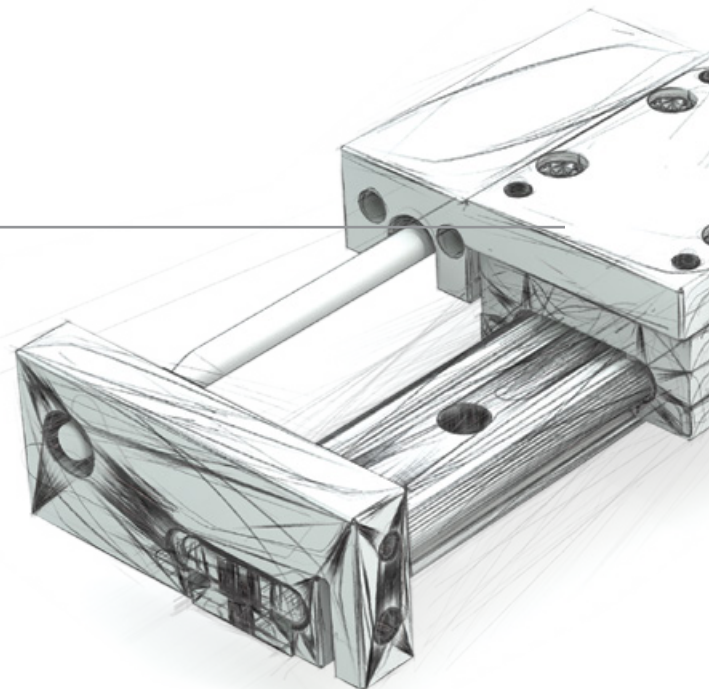

Nut Options

- Constant Force™ anti-backlash nut
- Standard fixed nut
- Good rigidity and vibration damping
- Self-lubricating and maintenance free

Compact Series Linear Guide Systems

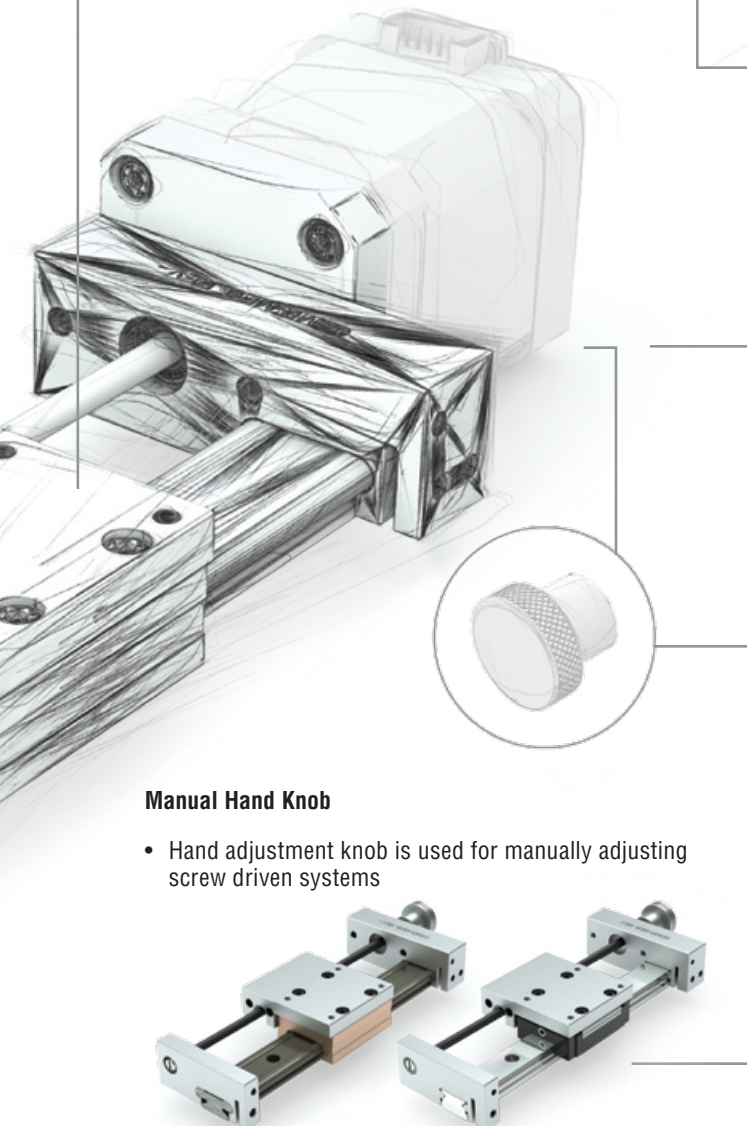

Bearing System Options

Profile Rail Technology Ball Bearing Linear Guides

- HIGH RIGIDITY & PRECISION
- High load and moment capacity
- Dust proof design
- Suitable for high speeds
- Supports cantilevered loads
- Low coefficient of friction

Manual Hand Knob

- Hand adjustment knob is used for manually adjusting screw driven systems

Drive Type Flexibility

Integrated Stepper Motor

- NEMA 17 or NEMA 23 motors
- Lead screw aligned and fixed directly with motor
- Fewer components means greater accuracy and increased rigidity

Motor Mount

- Attach stepper, servo, or smart motor
- Compatible with NEMA 17 and NEMA 23 motor sizes
- One-piece main frame holds shaft-to-shaft centerline
- Easily attached with adapter plate and coupler
- Assembled system available with motor and motor mount, consult factory

Applications

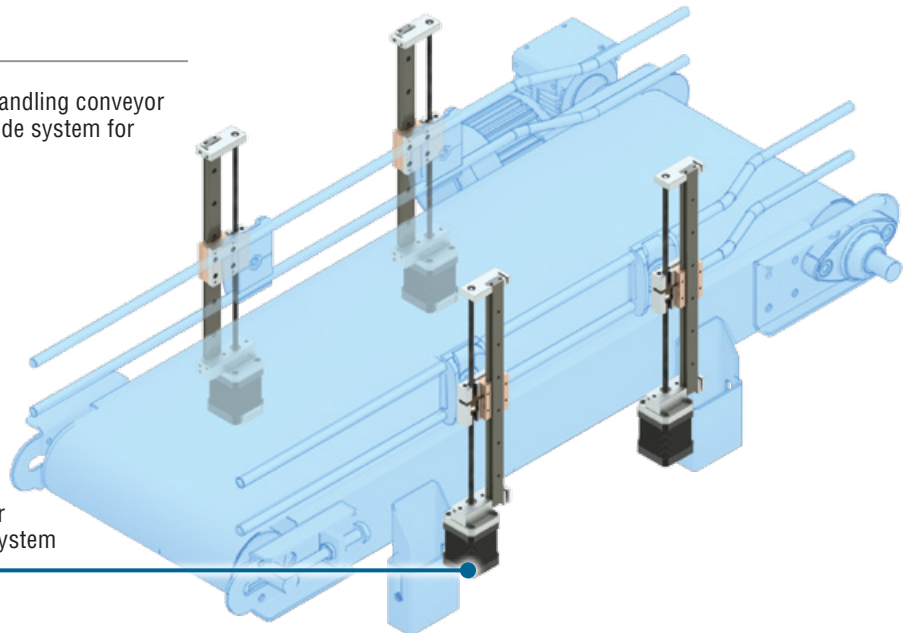

MEDICAL AND LABORATORY EQUIPMENT:

The self-lubricating FrelonGOLD® bearing liner, in the plain bearing option of the Compact Series, is ideal for environments where no grease or lubrication can be present.

WELL PLATE HANDLING: Compact Series installed in an intricate well plate handler—providing accurate and reliable linear motion.

AUTOMATED CONVEYOR: Material handling conveyor systems utilize the Compact Series linear guide system for maintenance free, repeatable linear motion.

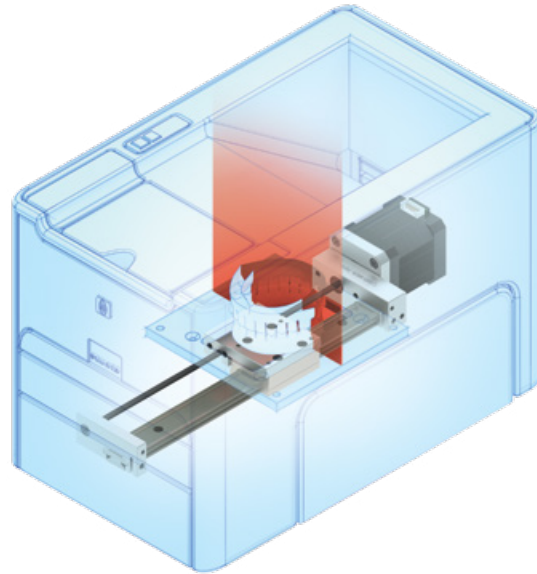

Integrated stepper motor reduces the number of components and improves rigidity in the system

Applications

SCANNING EQUIPMENT: High precision and smooth operation are required when designing linear motion for laboratory scanning equipment. The plain bearing system utilizes FrelonGOLD®—a self-lubricating, maintenance free surface that does not require oil.

CNC ROUTER: The plain bearing version of the Compact Series is ideal for harsh, dirty environments such as a CNC router. The carriage acts as a wiper as it clears away contamination such as dust and debris from the rail.

Plain bearings utilize the bonded FrelonGold® self-lubricating maintenance-free surface

BOTTLING: The Compact Series is ideal in bottling and food service applications that require repeatable motion and involve various load capacities.

Bearing System Selection

Step 1

Step 2

Step 3

Gliding Surface Technology

PLAIN BEARING

- Low cost
- Utilizes bonded **FrelonGOLD®** bearing surfaces
- Self-lubricating and maintenance free
- No catastrophic failure
- No metal-to-metal contact, vibration damping
- Wide temperature range
- Resists contamination
- 510 mm maximum length

Note: Plain bearings should comply with the 2:1 ratio rule.

[System Ordering Information—Page 13](#)

[White Paper Link: Demystifying the 2:1 Ratio](#)

Profile Rail Technology

BALL BEARING LINEAR GUIDES

- High precision and high speeds
- Size 15 mm bearing block
- Rigid and precise recirculating ball design
- Increased stiffness and preloaded bearing performance
- Supports cantilevered loads
- Low coefficient of friction
- Upgrade to high precision carriage upon availability
- 510 mm maximum length

[System Ordering Information—Page 13](#)

**UNIFORM DIMENSIONING
PROVIDES DESIGN FLEXIBILITY.**

Step 1

Lead Screw & Nut Options

Step 2

LEAD SCREW OPTIONS

- 6 mm and 10 mm diameter lead screw
- Self-lubricating PTFE coated
- 1, 2, 5, 10 mm leads most common
- Other leads available—consult factory

Step 3

Consult Factory for 10 mm Diameter Screw System • 800-962-8979

NUT OPTIONS

Constant Force™ Anti-Backlash Nut

An intuitive leap forward in nut design for lead screw applications, Constant Force Technology utilizes a constant force spring to apply a uniform pressure to the nut at all stages of the motion profile.

- Greater consistency and resistance to backlash
- Configurable for various torque requirements
- Patent pending self-adjusting anti-backlash feature
- Polymer nuts are self-lubricating and maintenance free

Standard Fixed Nut

- Good rigidity and vibration damping
- Polymer nuts are self-lubricating and maintenance free

Patent pending Constant Force Technology nut provides consistent anti-backlash operation

Motor Type Selection

Step 1

Step 2

Step 3

INTEGRATED STEPPER MOTOR

- Lead screw aligned and fixed directly with motor
- Fewer components means greater accuracy, increased rigidity, and less cost
- 6 mm and 10 mm diameter lead screw driven
- NEMA 17 and NEMA 23 motors
- Single and double stack
- Standard wire connection is onboard plug—included connector plug with 12" leads
- Longer leads available, consult factory

Onboard connector plug with 12" leads included with purchase

[System Ordering Information—Page 13](#)

MOTOR MOUNT

- One-piece main frame holds shaft-to-shaft centerline
 - Extends motor and coupler life
 - Increases accuracy and repeatability
- Attach NEMA 17 or NEMA 23 stepper, servo, or smart motor
- 6 mm and 10 mm diameter lead screw driven
- Easy to assemble
- Easily attached with adapter plate and coupler
- Assembled system available with motor and motor mount, consult factory

Gliding Surface Technology

PLAIN BEARING

OVERVIEW

- Low—23 mm—profile design
- 510 mm maximum length
- Size 15 mm bearing block
- Utilizes the bonded **FrelonGOLD®** self-lubricating and maintenance free bearing surfaces
- Smooth and quiet operation
- Vibration damping and shock resistant

LEAD SCREW & NUT

- Lead screw 6 mm and 10 mm diameter, consult factory for 10 mm
- 300 series stainless steel with PTFE coating
- 1, 2, 5, 10 mm leads most common
- Other leads available—consult factory
- Constant Force™ anti-backlash or standard fixed nut

MOTOR & DRIVE TYPE

Integrated Stepper Motor

- Integrated lead screw eliminates components and tolerance stack-ups
- Improved rigidity and performance
- Reduced system costs
- Connector with 12" flying leads included

Motor Mount

- Designed to work optimally with R+W EKL2 coupler

Manual Hand knobs

- Hand adjustment knob is used for manually adjusting screw driven systems

VELOCITY LOAD CURVES HORIZONTAL

6 mm and 10 mm diameter lead screw

NEMA 17

NEMA 23

Motor Mount Option Benefits

PBC LINEAR'S DESIGN WITH PRE-ENGINEERED ALIGNMENT

- One-piece main frame holds shaft-to-shaft centerline
- Extends motor and coupler life
- Increases accuracy and repeatability
- Easy to assemble

PBC LINEAR'S DESIGN VS. ALTERNATE DESIGNS

PROBLEMATIC DESIGNS CAUSE MIS-ALIGNMENT

- Mis-alignment between motor shaft, coupler, and screw shortens life and affects motion quality
- Mis-alignment results in camming or lobbing motion that translates to inconsistent linear movement
- Difficult to align and prone to deflection
- Over-torque of coupler causes accuracy loss

PROBLEM #1: DEFLECTION

PROBLEM #2: TWIST

PROBLEM #3: OFF CENTERLINE

Assembly 20

Maintenance

Lubrication 21

TIPS FOR SAFE INSTALLATION AND OPERATION

- Only qualified personnel should transport, assemble, operate, and maintain this equipment.
- Always wear appropriate personal protection equipment, such as safety glasses and hearing protection.
- Read and observe the installation, operating, and safety instructions provided by the manufacturer. Incorrect handling and operation may result in damage to equipment and personal injury.
- Comply with all installation specifications and requirements to ensure proper setup.
- Provide a flat and stable mounting surface.
- Be sure sufficient space is provided to permit full carriage travel with no hard stops.
- Be sure power is OFF before performing actuator maintenance.
- The unit should be checked regularly for worn or damaged components. Follow recommended service intervals and replace defective parts immediately. Always replace parts with the same make and model as the original.
- Be aware that most actuator configurations are not self-braking. A load can move if the drive force is disconnected, or if drive train components are detached. This is particularly true for vertical applications. The load should be secured prior to service. Consider installing an electromechanical power-off brake in vertical configurations to prevent potential damage or personal injury.
- Actuators should be wiped down occasionally to keep them clean. Use fluids sparingly and be sure none seeps inside. Do not use strong or harsh cleaning agents.
- Always test run actuators after maintenance work is completed.
- Do not back-drive the lead screw by moving the carriage by hand.

MOUNTING TIPS

- Mount the Compact Series through the holes in the rail
- Counter bores accommodate M3 SHCS
- The number of counter bores varies with the length of rail

Motor Mount & Coupler Information **User Manual**

COUPLER

- Compact Series motor mounts are designed to work optimally with the R+W EKL2 coupler
- Other couplers can be used under the following conditions:
 - Maximum O.D. = 25 mm
 - Maximum length = 26 mm
- Coupler should be sized per the Compact Series actuator.

CAUTION

Verify coupler bore diameters and depths will accept both actuator stub shaft and motor shaft.

STUB SHAFT DIMENSIONS

User Manual Motor Mount Assembly

MOTOR MOUNT ASSEMBLY

Components:

- Base actuator unit
- Motor (customer supplied)
- Motor Mount Kit
 - Motor Plate
 - Main Frame
 - Cover
- Coupler (customer supplied) R + W EKL2 recommended

Fasteners: (9) M4 x 12 mm SBHCS (supplied by PBC Linear),
(4) Customer supplied motor fasteners (See Table 2)

Tools Required: Hex Key (See Table 1)

Suggested Thread Locker: Blue Loctite® 242 or equivalent

TABLE 1

Hex Key Size Needed:

- M3 SHCS = 2.5 mm Driver
- M4 SBHCS = 2.5 mm Driver
- M5 SHCS = 4 mm Driver

TABLE 2

Customer Supplied Fasteners:

- NEMA 17 Motor = M3 x 0.5 SHCS
- NEMA 23 Motor = M5 x 0.8 SHCS
- 60 mm Servo Motor = M5 x 0.8 SHCS

TABLE 3

Fastener Torque Values:

- M3 SHCS = 8-10 in/lb [1.0-1.2 Nm]
- M4 SBHCS = 17-21 in/lb [2.0-2.4 Nm]
- M5 SHCS = 37-45 in/lb [4.2-5.1 Nm]

ASSEMBLY STEPS

1. Slide coupling onto shaft and leave loose.
2. Install main frame to actuator end block using (4) M4 x 12 mm SBHCS. Snug fasteners, but do not tighten.
3. Install motor plate to main frame using (3) M4 x 12 mm SBHCS. Apply blue Loctite® 242 or equivalent threadlocker and torque to 17-21 in/lb [2.0-2.4 Nm] (See Table 3).
4. Install motor to motor plate with customer supplied fasteners (See Table 2) and install shaft into coupling. Snug fasteners, but do not tighten.
5. Check for proper shaft engagement on both sides (per coupler manufacturer specs).
6. Once system is aligned, final torque all fasteners appropriately (See Table 3).
7. Install cover on pins in casting (snaps in place).

Lubrication **User Manual**

INITIAL LUBRICATION DURING INSTALLATION

Some PBC Linear systems are shipped with a preservative lubrication applied to the raceways. If so, additional lubrication should be applied during installation. Proper lubrication dissipates heat, increases service life, and reduces friction, wear, and corrosion. Recommended lubricants are listed where applicable, but there are some lubricants which **SHOULD NOT** be used on any configuration.

DO NOT USE: WD40; motor oil; oils with additives; moly or other filled greases; PTFE sprays, oils, or greases; or sprays containing fluorocarbons or silicone.

RECOMMENDED LUBRICANTS

Plain Bearing (GST - Gliding Surface Technology)

Recommended Lubricants: way lube oils, lightweight oils, 3-IN-ONE® oils, and lightweight petroleum-based greases. The PTFE coated lead screw and polymer nut require no lubrication during normal operation, but should be routinely inspected for damage and wear. In certain applications, however, an external lubricant may be desirable. Contact a PBC Linear applications engineer for guidance regarding additional lubrication.

Profile Rail (PRT - Profile Rail Technology)

Recommended Grease: Synthetic oil based lithium-soap grease with an ISO VG32-100 viscosity.

Recommended Oil: Synthetic oil CLP or CGLP based on DIN 51517, or HLP based on DIN51524.

Viscosity range should be ISO VG32-100.

RELUBRICATION

Linear guide raceways should be relubricated periodically with oil or grease. Recommended lubricants are listed where applicable, but there are some lubricants which **SHOULD NOT** be used on any Compact Series configuration.

DO NOT USE: WD40; motor oil; oils with additives; moly or other filled greases; PTFE sprays, oils, or greases; or sprays containing fluorocarbons or silicone.

The relubrication interval is dependent on many operating and environmental conditions, such as load, stroke, velocity, acceleration, lubrication type, mounting position/orientation, UV exposure, temperature, and humidity. The actual lubrication interval should be determined by tests conducted under actual application conditions.

While the actual relubrication intervals are application specific and determined only through testing, the following “first check” guidelines can typically be used as a starting reference point under “normal” conditions:

Relubrication every 1000 km; 50000 cycles; or six months (whichever occurs first)

Extended Lubrication Interval

Relubrication every 2500 km; 100000 cycles; or one year (whichever comes first)
